COPPER

Naturally derived amino acid-nutrient complex that enhances tissue absorption of nutrients, increases mobility throughout the plant, promotes rapid physiological response, minimizes phytotoxicity and environmental impact.

Key Benefits

- Essential for the activity of several enzymes involved in photosynthesis and respiration.
- Supports the formation of lignin in cell walls, leading to stronger and more robust plant structures.
- Addresses copper deficiencies, which can cause issues like stunted growth and wilting of young leaves.
- Copper strengthens plant tissues and helps in the defense against fungal and bacterial pathogens.
- Supports healthy flower and seed development, leading to better yield and quality.
- Enhances plant resilience to environmental stresses such as drought, heat, and cold.
