Yield Advantages On Multiple Crop Types

Prime Nutrients for Plant Health

2% Humic Acid 1% Nitrogen 2% Soluble Potash

-  Boron
-  Cobalt
-  Copper
-  Iron
-  Manganese
-  Molybdenum
-  Zinc

Benefits & Advantages

Humics enhance soil aeration and water retention, improving root development. They stimulate beneficial microbes and make micronutrients more accessible for plants.

Kelp provides essential nutrients and growth hormones, boosting stress resistance. This combination ensures higher yields, improved quality, and stronger plant immunity.

Before seeding, the product prepares the soil for better germination. During growth, it supports with a steady nutrient supply. After harvest, it replenishes nutrients and maintains soil health for future crops.
